

ABSTRACT OF THE DISCLOSURE

A carrying handle of luggage comprises an intermediate grip including two end extensions each having an elongated opening, two end connecting mechanisms each including a first post and a second post each having inner threads at inside wherein the first post is inserted into the opening and the luggage case and the connecting mechanism are fastened together by driving two fasteners through a top of the luggage case into the first and second posts respectively, and two bellows mechanisms each including a bellows member interconnected the grip and the connecting mechanism. Lifting the grip will both move the extensions and expand the bellows mechanisms toward a center of the grip until one end of either opening is stopped by the first post and form a space between the grip and the top of the luggage case.
